A WORD FROM OUR MARKETING EXECUTIVE

look who's
back!

Ruby Booker, Marketing Executive

Hi I'm Ruby, you may recognise me from my time at Dental Sky from 2016 – 2019! I am so excited to have re-joined the team as the Marketing Executive!

Since starting my new role at Dental Sky in November 2021 I have been busy putting together marketing plans and content to ensure we are delivering key brand messaging to all our customers. I've also been posting to our social channels so be sure to give us a follow @dentalsky

In this jam-packed issue of Dental Sky News we speak to the amazing team over at DentAid to see some of the fantastic work they've been doing.

We also speak to Rebecca Power and Sary Rahma on how training can help you and your team prepare for a dental emergency.

Be sure to check out our spotlight pages for some amazing great deals on your favourite products too!

FEATURED PRODUCT

FLOWFLEX COVID19 LATERAL FLOW TESTS

The Flowflex SARS-CoV-2 Lateral Flow Rapid Antigen Test provides an aid in identifying individuals suspected of an active COVID-19 infection within the first seven (7) days of the onset of symptoms.

Click here to confirm approved status on gov.uk (Acon Biotech - Flowflex)

- Cassette Format
- UK Government Validated
- CE approved and ISO certified
- Detects the nucleocapsid protein antigen from SARS-CoV-2 Nasal Specimen sample
- Results in 15 minutes

Relative Sensitivity: 97.1% (83.8%-99.9%)*
Relative Specificity: 99.6% (97.7%-99.9%)*
Accuracy: 99.3% (97.5%-99.9%)*

ORABLOC®

4% articaine with epinephrine 1:100,000 or 1:200,000 in 1.8ml cartridges. Orabloc from Pierrel gives you everything you would expect from articaine with epinephrine and is also manufactured in aseptic conditions for increased benefits.

- Rapid onset of anaesthesia
- Less degradation of epinephrine during aseptic production resulting in only 10% overage of epinephrine compared to 15% in other anaesthetics.
- Improved shelf life of 24 months at room temperature
- A stable pH of the solution (necessary to reduce soreness injection) during the life of the product - in aseptic production pH change does not occur.
- Less decay of antioxidants (in the solution to protect epinephrine from oxidation) during the lifetime of the product.

Orabloc 1:100,000 (50)	165-0003	Was £18.95	Now £18.25

ORABLOC NEEDLESTICK SAFETY SYSTEM

An innovative needlestick Safety System from Pierrel, the makers of Orabloc, that reduces exposure to contaminated anaesthetic needles in dentistry prior to the point of needle disposal.

- Works with bent or angled needles.
- Easy to use One-handed Automated Recapping Method.
- Caps both the front and backend of dental needles.
- 100 capsules in each device will protect needles for 100 injections.
- Coloured capsules for easy visualisation when capsules are running low.
- Superior silicone nonskid surface to ensure stability.
- 100% portable.
- Addresses all needles regardless of size or gauge.

THE WAND®

Wand Dental brings the administration of local anaesthesia to the 21st century with the The Wand® STA Instrument. For over 150 years syringes have gone by largely unchanged, but now they bring their computer assisted anaesthesia system, capable of providing virtually pain-free dentistry.

The computer assisted anaesthesia system develops practices by improving patient satisfaction, building loyalty and referrals, and distinguishing the dental practice. It does so by enabling successful and highly predictable single tooth anaesthesia with no collateral numbness. Real time visual & audible feedbacks guide accurate identification of the correct location for intraligamentary injection, informing if the needle is no longer in the correct site, becomes blocked for any reason or if too much pressure is being used, stopping the injection before the cartridge cracks and leaks.

The Wand handpiece provides unparalleled tactile control and increased comfort with a unique pen-like grasp and Feather-like weight, increasing precision and visibility for the provider and reducing anxiety in patients.

Computer controlled flow rates means automatic control and regulation of the pressure during the injection, delivering anaesthetics at a precise and consistent rate below the patient's pain threshold and providing a consistent flow to maximise injection predictability. 3 speeds are available for use, each with a flow rate tailored for each injection technique.

Orabloc®

**4% articaine hydrochloride with epinephrine
solution for injection 1:100,000 and 1:200,000**

Perfectly Preserved A great new idea in anaesthesia

Orabloc from Pierrel gives you everything you would expect from articaine with epinephrine and is also manufactured in aseptic conditions for increased shelf life.

Orabloc is used for the local anaesthetisation of dental treatments in adults, adolescents and children from 4 year old, including:

- Surgery of the oral mucosa or bone in which a greater reduction in blood flow is important
- Surgery of the dental pulp
- Removal of broken teeth
- Longer surgical interventions
- Oral surgery of the bone with open gums
- Removal of cysts
- Surgery in the gum area or at the gum-tooth margin
- Removal of root apices

With a rapid onset of anaesthesia of 1-3 minutes with lasting effects of 1-2 hours for infiltrations and nerve blocks, Orabloc has a 24 month shelf life when stored at room temperature. Presented in blister packed rows of 10 for optimum protection during storage and handling.

Orabloc 1.8ml 4% Articaine 1:200,000 (50)
Orabloc 1.8ml 4% Articaine 1:100,000 (50)

Abridged Prescribing Information: ORABLOC 1:100,000 COMPOSITION: Articaine Hydrochloride 4%, Adrenaline (INN: epinephrine) tartrate expressed as base 1:100,000. **ORABLOC 1:200,000 COMPOSITION:** Articaine Hydrochloride 4%, Adrenaline (INN: epinephrine) tartrate expressed as base 1:200,000.

THERAPEUTIC INDICATIONS: Local or loco-regional dental anaesthesia in patients of at least 4 years in case of classic or muco-gingival operations or dental surgical procedures where bone removal is necessary.

DOSAGE AND ADMINISTRATION: For most common operations, one infiltration with 1.7 ml is sufficient. Do not exceed the equivalent of 7 mg articaine hydrochloride per kilo of weight. Dosage in children should be commensurate with their weight. When Orabloc is used in children and adolescents, the minimum volume necessary to achieve adequate anaesthesia should be used. The injection quantity is to be dosed individually according to the child's and adolescent's age and weight. A maximum dose of 5mg articaine per kg body weight should not be exceeded.

CONTRA-INDICATIONS AND PRECAUTIONS FOR USE: Hypersensitivity to any local anaesthetic agent or any component of ORABLOC. Do not use ORABLOC in patients who have experienced bronchospasms after administration of products containing sulphites, patients with deficiency in plasma cholinesterase activity, patients receiving MAOI or tricyclic anti-depressants, patients in whom general anaesthesia might be required to complete the procedure and in children under 4 years of age.

SPECIAL WARNINGS: ORABLOC should be used with caution in patients with hepatic disease, thyrotoxicosis, cardiovascular disease, abnormalities of cardiac conduction, epilepsy, and in diabetic patients. Intra-vascular injection is strictly contra-indicated. Resuscitative equipment, anti-convulsant medicines and other resuscitative drugs should be available for immediate use. The product should only be used in pregnancy when the benefits are considered to outweigh the risks.

ABILITY TO DRIVE AND USE MACHINES: No demonstrated effects upon motor coordination, however subjects who suffer adverse effects should not drive or use machines until symptoms have resolved.

INTERACTIONS: ORABLOC should be administered with caution to any patient receiving drugs with sympathomimetic properties or with agents whose therapeutic actions may be antagonised by adrenaline. Articaine should be given with caution in patients receiving an antiarrhythmic agent.

UNDESIRABLE EFFECTS: Hypersensitivity, overdosage or intra-vascular injection may result in excitatory or depressant manifestations of the CNS, depressant cardio-vascular reactions, respiratory and allergic reactions. Patients with peripheral or hypertensive vascular disease may develop ischemic injury or necrosis.

PHARMACEUTICAL PRECAUTIONS: Store in the original container, below 25°C. Protect from light.

PHARMACEUTICAL FORM: Solution for injection contained in 1.8ml dental cartridges.

LEGAL CATEGORY: POM. FOR FURTHER INFORMATION CONTACT THE PRODUCT LICENCE HOLDER: Pierrel Pharma S.r.l. Strada Statale Appia, 46/48 - 81043 Capua (CE) Italy.

ERYTHROPLAKIA OF THE ORAL CAVITY

A SEVERE POTENTIALLY MALIGNANT LESION

A CLINICAL CASE PRESENTATION

INTRODUCTION

Despite recent advances in oral cancer treatment, the survival rates of affected patients are still low and do not exceed 60% globally five years after diagnosis.

The disease aggressiveness, the anatomical complexity of oral sites and the stage of the disease at the time of diagnosis are the main reasons for the high mortality of these malignant tumors, the morbidity associated with therapies and the deterioration of the patient's residual quality of life.

Over 85% of oral malignant tumors originate from the epithelium of the oral mucosa as oral squamous cell carcinomas (OSCC).

They are in most cases preceded by diseases and lesions of the mucosa which are not still malignant tumors but that can transform and develop as cancers.

Patients with early-stage oral cancers often present only vague symptoms with minimal oral mucosal lesions. Early identification of signs, symptoms and lesions related to oral premalignant diseases or cancers can reduce the mortality and the morbidity.

PMOLs or potentially malignant oral lesions, previously known as oral precancerous lesions, are areas of genetically altered tissues more likely than normal oral mucosa to transform in cancers. The most frequent PMOLs are leukoplakia, erythroplakia, lichen planus and

submucosal fibrosis.

Oral erythroplakia is a red plaque or patch of the oral mucosa that cannot be clinically diagnosed as any other known disease or condition.

The reported prevalence varies between 0.02% and 0.2%. Oral erythroplakia is the PMOL with the highest rate of malignant transformation and in over 50% of cases evidences the presence of malignant tissues with histopathology.

Oral erythroplakia is often asymptomatic and sometimes difficult to find with the clinical examination.

If a persistent red area of the oral mucosa is still observed after 14 days from the first visit, a diagnostic biopsy with histopathology is always required to reveal the characteristics of the pathological tissue and the possible presence of dysplasia or malignant tissue.

In recent decades, devices have been introduced into clinical practice that allow the visual inspection of the so-called "autofluorescence" (OFI) of the oral mucosa during the clinical examination of the oral cavity.

Devices for the detection of the autofluorescence of the oral mucosa can be used and useful to improve the identification of areas of inflammation or premalignancy or cancer, in order to improve the selection of

areas where to perform the diagnostic biopsy and/or to control the progression and results of surgical and medical care of the affected patient.

CLINICAL CASE PRESENTATION

The clinical case of a 62-year-old man suffering from erythroplakia of the oral cavity is described, where the incisional biopsy examination histologically showed severe dysplasia while the histopathology of the subsequent surgical removal demonstrated oral squamous cell carcinoma.

Patient G.B. came in the outpatient unit of Oral Pathology and Medicine. He was sent by his dentist and dental hygienist because of the presence of an area of redness in the oral cavity.

The patient reported that he was neither a smoker, had never smoked, moderately consumed low-grade alcohol at meals and was not suffering from systemic diseases, except for high blood pressure treated with an appropriate ACE-inhibitor drug.

The patient also reported that the area of abnormal redness had been present for several months, and caused a slight burning when acidic or spicy foods came into contact.

The visual clinical examination showed a polygonal lesion of red color of about 2x2 cm (Figure 1) between the upper left retromolar trigone, the hard palate and soft palate. The abnormal reddish area showed small areas of

whitish color (erythroleukoplakia) towards the upper limit.

The palpation of the lesion demonstrated tissue of an increased consistency with a velvety papillary surface. Firm palpation caused a localized slight bleeding.

The subsequent oral inspection with the OFI - optical fluorescence inspection device (Goccles® by Pierrel) device showed a dark color from irregular loss of autofluorescence, extended throughout the entire surface of the abnormal area (Figure 2).

Due to persistence greater than 14 days and the clinical appearance of the lesion, with the agreement of the patient, it was decided to immediately proceed with an incisional biopsy from the area identified and delimited by OFI visual examination.

After local infiltration of oral articaine anaesthetic 40mg/ml with vasoconstrictor 10mcg/ml, a small piece of pathologic tissue was taken by single-use punch scalpel 6mm dia; the bioptic specimen has been oriented on

special paper, placed into the bottle with 10% buffered formalin fixative pH 7.0 and sent to the unit of pathology with the case description on a special form.

In view of the oncological hypothesis, local hemostasis was obtained with compression without suturing, to avoid the deep transport of malignant cells.

The patient was discharged with appropriate dietary instructions (cold foods and drinks for the day, and no traumatic foods for a week) and recommendations in case of bleeding from the wound.

Chlorhexidine gel 0.5% was also prescribed to be applied twice a day for seven days and clinical control in the eighth day.

Histopathological examination of the biopsy showed "keratosis with severe dysplasia" and the patient was sent to the division of Otolaryngology for transoral surgical removal of the entire lesion, to be performed with CO2 laser in general anesthesia.

Histopathological examination of the complete lesion removed showed "the presence of a G2 early-stage squamous cell carcinoma with minimal infiltration of the chorion in the area of keratosis with severe dysplasia, with bottom and peripheral borders free from disease".

The biannual clinical and imaging follow-up performed showed persistent clinical healing with any sign of disease recurrence.

CONCLUSION

In the case of detection of an oral mucosal lesion, persistent for more than two weeks after local irritants removal and/or with clinical characteristics compatible with a PMOL, it is appropriate to carry out an immediate biopsy of the lesion. The use of diagnostic visual aids, such as toluidine blue staining and/or tissue autofluorescence visual assessment, can improve the results of the visual clinical examination and serve as a guide for the bioptic tissue sampling.

SUPRAFIL+

Suitable for anterior and posterior restorations with excellent aesthetics.

High translucency of enamel shades: exceptional aesthetic results

- High abrasion resistance
- Easy and long lasting polish
- Does not stick to instruments
- Easy to use
- Soft. Radiopaque
- Long working time
- Anterior and posterior restorations
- Direct and indirect restorations of class I to V
- Core build up materials
- Repairing and realisation of facings
- Aesthetic corrections: shade and shape

iBOND® UNIVERSAL

Small but mighty.

iBOND Universal is the universal, light-curing adhesive for any bonding technique and all indications. Being compatible with all dental materials, it is the all-rounder for reliable bond strength.

- Instant bonding success: Due to the unique moisture control system and optimal formula, iBOND Universal offers excellent dentine penetration and instant, reliable bond strength.
- Unique moisture control: Acetone acts like a water chaser and supports the fast evaporation of water. You benefit from this skillful system with easier air-drying, reduced technique-sensitivity and a homogeneous bonding layer.
- The all-rounder for bonding matters: iBOND Universal enables bonding of composite/compomer, precious metal, non-precious metal, zirconia or silicate ceramic, and is compatible with light-cure, dual-cure and self-cure materials without the need of a dual-cure activator.
- Easy and precise application: Self-etch, total-etch or selective etch - the choice is yours. In addition, our exclusive drop control bottle design delivers just the amount of bonding agent you need

That is how we define universal bonding. It is what you get with iBOND Universal.

G-ÆNIAL® A'CHORD + G-PREMIO BOND

G-ænial® A'CHORD is a universal composite restorative with a simplified unishade system and the latest addition to the G-ænial range, the culmination of 10 years of clinical success, representing the ideal balance of simplicity, aesthetics and advanced technology in one product

- Offers dentists a versatile universal composite for anterior and posterior restorations Thanks to its simplified unishade system, it achieves the aesthetics of the 16 classic Vita shades with its 5 core shades. It achieves invisible restorations with a reduced inventory and quick polishing which makes it not only time efficient but also cost effective.
- Offers natural fluorescence created by its unique filler technology that mimics the reflection of natural light which results in invisible restorations both in natural daylight and in special lighting conditions (e.g. UV light).
- Offers an ideal non-sticky consistency. This is a result of the combination of a Bis-MEPP monomer and optimised filler-monomer, which allows the dentist to easily sculpt the material with a hand instrument or a brush.

GETTING BACK TO WORK

A LOOK AT HOW THE CHARITY DENTAID HAS REACTED TO THE DISRUPTION OF THE PANDEMIC

Crises come in various guises with consequences varied and numerable. But what must be the biggest impact on the way we live our lives since World War Two has brought about far-reaching ramifications – the effects of which will continue long into the future.

The mobilisation of public health care in response to Covid-19 was a phenomenal feat, as nations attempted to protect the health and wellbeing of their populations. But in this effort to overcome what seemed the insurmountable, the oral health of thousands of people took a hit with the upheaval of dental services a blow to the profession. As a result, coronavirus has left dentistry with a legacy of problems and issues, which now need to be addressed.

The disruption to oral health care throughout the pandemic has been a major concern within the profession, with some of the most vulnerable people in society hugely affected.

Its hiatus created a bigger divide between the 'haves' and 'have nots' and access to NHS care – already problematic – only worsened.

For dental charity, Dentaïd, the pandemic has forever changed its operations. Previously focused on offering dental care to people in the poorest countries in the world, the charity had already expanded in 2015 to include helping to reduce pain for some of the UK's hard-to-reach, providing free dental care for homeless and vulnerable people.

Its mobile dental units visit hostels, day centres and night shelters, providing emergency treatment for people who find it difficult to access dental care. The Dentaïd team was also running oral health education programmes in schools. But, like many charities, all their work came to a shuddering halt in March 2020.

Eventually, in October 2020, the two Dentaïd mobile units were back on the road, the team began to pick up projects once again and their operations restarted. Jill Harding is the charity's communications director. She recalls, "It was hugely disappointing going into lockdown, as we had just started setting up clinics and our UK work was beginning to grow organically. We had been working hard to build up our work but, from March until September 2020, we were unable to get out. We had to furlough staff and suspend all UK operations

– we went into survival mode. Dentistry was not allowed to be delivered in the homeless shelters as these organisations had to shut and reduce activity. Soup kitchens and services for people experiencing homelessness weren't running meaning our patients were even harder to reach."

From the start of 2021, however, calls started to come in and the backlog of cases and worsening dental health statistics meant the ramping up of activity on the mobile units. Jill says, "We were keen to get up and running. We went back to Trinity Winchester and Albaré in Salisbury [that run a range of homes, drop-in centres and support services dedicated to helping the homeless and vulnerable] and back to Southampton, where homeless and vulnerable people from the city also receive free dental care at our mobile dental unit. Plus, new clinics were set up as other groups reached out."

In fact, Dentaïd has a presence in various towns in England, mostly focusing on the south to south west coastline and to the north in West Yorkshire, taking in Eastbourne, Hastings, Littlehampton, Worthing, Portsmouth, Weymouth, Leeds, York and Dewsbury.

*“We are only part
of the jigsaw,...
But without
good oral health, these
vulnerable patients
are not going to be
able to move onto new
chapters of their lives if
they are in pain.”*

Jill Harding, Communications Director,
Dentaid

”

There are also plans to restart their clinics in the UK's fishing communities in towns such as Lowestoft, Felixstowe and North Shields. These are a cohort of people whose seaborne working lives can mean missed opportunities to access dental care during normal hours.

Jill says, “Before the pandemic, we would have two or three clinics a month. Now we have four a week. In addition to our core work, we are also getting requests from different clinics to treat other hard-to-reach patients. This includes visiting Napier Barracks to care for asylum seekers and refugees.”

Often, the people they see, having survived the treacherous waters in boats across the Channel from Calais to Dover, are suffering dental pain and infection among other health problems.

For those who are homeless, dental problems can lead

to them selfmedicating with drugs and alcohol to mask dental pain if they are unable to access professional care, which in turn is problematic for anyone on rehab programmes. Statistics suggest around 15 per cent of homeless people have tried to extract their own teeth. Jill recalls some extremes some people have gone to in the effort to relieve themselves of pain, including one man who attempted to lever out a tooth using a spoon. Many have the misbelief that their teeth ‘aren’t worth saving’.

So, Dentaid provides a vital lifeline to better health and self-confidence for hundreds of people. During sessions, volunteer clinicians are also on hand to offer oral health advice, screen for mouth cancers as well as hand out toothbrushes and toothpaste.

Sadly, many vulnerable and homeless people can feel disengaged with traditional services and face logistical challenges, too. Often, they haven’t a mobile phone,

no email address and do not feel comfortable in the setting. Dentaid's support staff work hard to ensure they feel safe and comfortable.

The charity has two mobile units, each with one chair. Run by two Dentaid staff, the clinics require a dentist and nursing assistance. It is well supported by the profession but is always seeking new volunteers, who are required to undergo an onboarding process before volunteering.

Dental companies are also on side. Dental Sky, for example, gifts Dentaid a £100 allowance each month to spend on consumables and will be distributing the charity's annual report along with its orders, thereby relieving the charity of hefty postage costs.

Jill says, “We are fortunate that Dental Sky has supported us historically and recently gave us a £100 monthly budget to spend on consumables. They are also sending out our annual report with orders. It's financial support but also great marketing and is a key way of raising awareness of our work and letting dentists and their teams know we exist. We are growing all the time and get several calls a week from centres who need our help. We now have a long wish-list of places that have requested our mobile units – so much so that we need another vehicle, so any fundraising is hugely welcome. Demand is skyrocketing.”

The team at Dentaid firmly believe each patient they see deserves a chance at regaining their confidence and to feel better about themselves and their prospects. “We are only part of the jigsaw,” Jill says. “But without good oral health, these vulnerable patients are not going to be able to move onto new chapters of their lives if they are in pain.”

For more information, or to get involved with the great work that Dentaid do, visit www.dentaid.org, or @dentaid.charity on facebook.

LYLA S TYPE STERILIZER

The new Lyla offers a completely new S type sterilizer with unique upgradeability for customization to meet future or individual demands. This S type sterilizer offers the option for upgrade to full vacuum with a wealth of added benefits not seen in other sterilizers in its class.

Main product advantages of the new Lyla

- Cycle times from 23 minutes for an average 2.5kg load due to cycle optimization put the Lyla in a class of its own
- Intuitive user interface makes Lyla easy and efficient to use
- Built-in USB port, optional cycle report printer and barcode label printer enable complete documentation.
- The Lyla is ready to be connected for increased integration.
- The option to use the Lyla with the W&H Steri App allows remote control, monitoring and cycle history backup
- Lyla's high-quality build ensures reliability and long working life
- The only S type sterilizer with the option to upgrade to a type B sterilizer using the new Activation Code concept.

The Lyla's unique upgradeability allows users to customise it to their current and future needs.

Additional Activation Codes are available to allow customization and upgrading of the Lyla sterilizer.

- Type B Sterilizer upgrade thanks to a specific 'B cycle' Activation Code
- Upgrading to include 'Remote Data Storage' allows cycle information to be stored directly on the PC via Wi-Fi connection (requires optional rear USB port)
- The option of Advanced 'Traceability': gives the possibility to create different users and additionally an option for load release confirmation
- The 'All in One' upgrade includes all these features in one go

SUSTAINABLE COMPASSIONATE CARE

A look at how one practice stepped up its game during the pandemic.

Dentist Niket Patel believes that as patients have become more nervous due to the pandemic, the practice team have to offer reassurance that everything is in place to ensure they are as safe as possible. It is an approach that offers his patients the confidence to feel they are well looked after, and it is one he supports not only with an investment in his own professional development, but also through his commitment to dentistry beyond the four walls of his surgery.

An impassioned general dental practitioner with a belief in the one simple principle of 'a smile for life', he supports his clinical excellence and empathetic patient care with a matching enthusiasm for the politics of the profession, too.

Busy steering his team at Smile Essential in Leicester, Niket is also an executive member of the Leicestershire Local Dental Committee (LDC). It is a role he evidently values as much as he does the job of delivering care to his patients. In fact, he believes one supports the other, which makes his participation

important to dentistry at every level.

As he explains, "As part of the LDC, I am able to help my fellow colleagues, and as part of a committee, I can influence local decision-makers to ensure they understand the needs and concerns of Leicester GDPs and our patients."

Like many cities, Leicester comes with its own unique set of problems regarding dental care. This was compounded by a pandemic that was not kind to patient access.

Throughout those early months of lockdown, Niket (as part of the LDC team) worked with NHS England, Public Health England and the British Dental Association to maintain continuity of service whilst ensuring it was delivered in a Covid-19- safe environment. And this desire of wanting the best for patients is reflected at Smile Essential, too, where compassionate care offers a gateway to those patients for whom dentistry was put on hold. Looking back, Niket observes, "Throughout the pandemic, we endeavoured to maintain our personal service for all of our patients during

the more difficult times. We kept our patients updated via our website and social media platforms, informing them that we were here to help and that we would try our utmost to help solve any dental issues that may have arisen. Our team has always taken the time to get to know patients personally and listen to their wishes; good communication is imperative in this. With Covid-19 to contend with, we now speak to every patient the day before their appointment. We explain the procedure, what will happen at the appointment and talk them through the new arrangements. They are briefed on what to do on arrival at the practice, as well as what they can expect to see, such as the team wearing full PPE. We also explain that we are unable to see as many patients as we did prior to Covid-19 as we are required to allow extra time for the surgeries to be deep cleaned after each patient. We risk assess all patients for Covid-19 symptoms prior, and on arrival, to their appointments." To ensure excellent patient journey outcomes, Niket is also a firm believer in the power of a team. "Working together is paramount to ensure a consistent patient journey and a happy team. Given that our smiles and expressions are hidden behind masks, positive body language is a key part of this now. Our team will go the extra mile to ensure every patient has the best dental experience they can."

This compassionate care goes beyond this empathetic staff approach. The messaging on social media platforms, such as the practice's Instagram page, also reflects the practice ethos.

"We utilised Instagram during recent months to convey key messages about the team, so patients had insight before they came through the door. Social media has been very important to ensure details about the team were conveyed," he says.

And the practice environment also facilitates this. "Our practice is an oasis of tranquillity. We have scented candles, calming music, satellite TV in our patient lounge and music is streamed through Spotify. We have DVDs available in our treatment rooms, so patients feel relaxed and calm during treatment."

Patients are treated in a Belmont treatment centre that also fits in with the practice ethos of making the patient journey as comfortable and relaxed as possible.

Niket explains, "We have been using Belmont equipment for many years now. It is very reliable and comfortable and has served us well, so we would not change this." The practice is dental phobia certified, which can be an attraction for the more nervous patient, particularly significant in the current

climate. "We use The Wand, which is a painless injection system, so patients do not know or feel that they have had an injection. It was very important to implement it into the treatment and care of our patients, especially with our more nervous patients. It is a brilliant piece of equipment"

With the changes in equipment, materials and knowledge of dentistry, the profession was quick to adapt to the global upheaval that brought about huge changes for every clinician, and Niket remains passionate about the dentistry he is able to deliver.

Indeed, he is as enthusiastic about the technology and the team that help to support this compassionate care as he is the knowledge and skills he possesses to transform people's smiles.

As one of the practice's Instagram post reveals, "Creating beautiful confident smiles takes a whole team of people. We love what we do and are forever grateful for the dedication and commitment from our whole team to provide excellent dentistry and world-class customer care."

And seemingly, not even a pandemic can dampen this spirit.

ANAQA ELEVATORS

Anaqa Elevators are made of high quality French steel which provide maximum corrosion resistance, efficiency and sharpness as well as excellent grip in the handles. They are individually boxed which includes a tamper evident seal. Every Anaqa product is subjected to a rigorous four-step quality control process. This robust process is the reason why Anaqa are able to confidently offer industry-leading warranties on all their instruments.

- Unique 14mm handle for best grip and handling
- Circular handle improves handling in any position
- The depth and angles of the handle's grooves are optimised to provide the maximum friction between the instrument and the glove, virtually eliminating the risk of slippage during dental procedures
- Highly efficient, sharp and slim tips for better access and function
- Stunning finish with high corrosion resistance
- Four stage QC process
- High quality medical grade steel
- Titanium nitride gold coating for premium finish and maximum corrosion resistance
- Smooth joints for stress-free working
- Ergonomic, lightweight design

WHICH ONE?

FIVE ASPECTS TO CONSIDER WHEN BUYING A HANDPIECE

There's a saying that "a good workman never blames his tools", but as a dentist it is fair to say that well-made equipment is essential in helping achieve high-quality, predictable results. Without a suitable armamentarium, you run the risk of poor treatment outcomes and errors are much more likely to occur. As such, it is crucial that careful consideration is given anytime you make a new purchase.

This is particularly true in regards to handpieces, as they are among some of the most important tools that a dentist uses on a day-to-day basis. Here are some of the elements that you should give thought to if you hope to end up with a first-class product that suits your clinical needs and preferences.

1. AIR VERSUS ELECTRICITY

Handpieces are powered one of two ways – by air or electricity. Which one you choose will determine speed and usability as they both offer something very different. Air-driven handpieces, for instance, tend to have a higher speed with a lower torque. What's more, they are lighter, easier to handle and smaller in head height than electric motors and, as such, are a popular option for those looking to reduce fatigue and improve ergonomic practice. By comparison, electric motors are heavier and slower, but the speed and torque are generally much easier to control thanks to a promised consistency that does not decrease with resistance or an increased load. It's also important to note that electric motors are considerably quieter with less vibratory output.

It is worth noting that the speed-increasing Synea Fusion from W&H offers a wealth of features that make it reliable, efficient, and easy-to-use. The handpiece has been designed to ensure minimal aerosol production. The W&H speed-increasing handpiece is used in conjunction with an electric motor allowing it to run at maximum speeds of 200,000 rpm whilst offering impressive torque, control and precision.

2. LIGHT SOURCE

Most modern handpieces offer an integrated light source but there are various options available that offer varying degrees of illumination, so careful selection is recommended. Some handpieces, for instance, use glass rods to transmit a halogen light to the head, but the field of illumination can be restricted to the immediate vicinity of the bur with this design. The ideal solution is a handpiece that has a ring of LED lights integrated into the instrument head as this ensures a wide area of illumination with no shadowing or obstruction.

3. STERILISATION AND MAINTENANCE

Still, it's no good purchasing a handpiece that ticks all the clinical boxes if it can't endure rigorous sterilization. Decontamination is an essential part of daily practice, after all, with every instrument reprocessed multiple times a day, sometimes six days a week. Ultimately, only a quality-made handpiece that has been designed with sterilization in mind will be able to withstand such a demanding routine without compromising on functionality or performance.

Equally as important is choosing a handpiece that can be easily maintained, particularly in regards to oiling, as lubrication is essential for longevity and performance. For ultimate compatibility, it can help to choose a handpiece from a reputable manufacturer that also produces decontamination equipment. That way, you can rest assured that your handpieces will be reprocessed and cared for in the most efficient and seamless way possible.

4. AFTERCARE

Be sure to check what level of aftercare service would be available to you should you purchase a particular handpiece, otherwise you might find yourself out of pocket. Choosing a manufacturer that offers comprehensive aftercare will ensure you have access to

technical support from qualified professionals, regular servicing, an attractive warranty, and a quality repair service that uses authentic replacement parts. The alternative is unwanted downtime, problems with the performance of your handpiece, reduced shelf life or ending up with counterfeit parts that are poor quality and ineffective.

5. BRANDED VERSUS NON-BRANDED PRODUCTS

In the same vein, it is best to avoid cheap or unbranded products, as these are more likely to be of poor quality and often do not comply with the required safety and performance regulations and standards. As the saying goes, you get what you pay for. If you opt for a low-price option that seems too good to be true or purchase from a supplier whose authenticity is questionable, you will likely end up out of pocket in the long run. Don't be fooled by fake handpieces, made to look like a well know brand, they do not carry the same safety accreditation.

Look for the added benefits of purchasing a respected brand. Take a look at the full Synea Fusion range of high quality straight and contra-angle handpieces for exceptional ergonomics and reliability enabling you to maintain an efficient workflow. While all W&H turbines have hygienic head anti-retraction systems to prevent cross contamination.

CHOOSE W&H

W&H's exceptional reputation for providing an unrivalled aftercare service alongside high quality products, is based on its many years of experience in the market, making it the obvious choice for anyone looking for a new handpiece. There are a number of different products available, including the Synea and Alegria ranges, as well as the Proxeo range of prophylaxis handpieces – all of which include a data matrix code to facilitate the sterilization process. In addition, W&H offers a complete decontamination solution for ultimate compatibility, including the Assistina TWIN. This has been specifically designed to reprocess and oil handpieces quickly and efficiently.

There's no doubt that selecting a dental handpiece can be a painstaking task. However, by sourcing top-class solutions from a trusted manufacturer, you are sure to find 'the one' that ticks all the boxes and meets your expectations now and in the future.

Kate Scheer is marketing communications executive at W&H (UK) Ltd, a professional marketer with an MA in strategic marketing and over 25 years' experience working in the dental industry.

TEON THERMAL WASHER DISINFECTOR

The Teon thermal washer disinfectant is easy to use and highly efficient offering an exceptional standard of cleaning and reprocessing. It offers top quality cleaning and disinfection for the dental practice, maximising efficiency and increasing the effectiveness of the decontamination protocol.

Distinguished by its high-quality performance the Teon ensures a successful, holistic cleaning process for dental instruments. Due to its modern design, the Teon, perfectly integrates into a reprocessing room.

There are a number of safety devices within the Teon to give added confidence, including:

- Integrated spray arm monitoring for excellent reprocessing results.
- Speed variable pump which increases/decreases the pressure as required during reprocessing.
- Filter system to remove dirt particles, preventing damage to your instruments.
- An automatic door locking system protects against risk of injury due to opening during a cycle.

The Teon is designed to be easy to clean and it's integrated salt container in the door ensures easy and convenient refilling. It has a short cycle times ensure quick efficient reprocessing.

Teon's large crease free chamber allows higher throughput of instruments, with optimal rinsing capability and capacity, ensuring hygienic rinsing.

The intuitive user interface makes it particularly easy to operate in the demanding everyday reprocessing routine. The control panel is easy to operate and also serves as a door opener.

EASY-FILE FLEX

EASY-FILE FLEX is a variable taper Nickel Titanium endodontic file system with improved flexibility due to a special heat treatment.

Designed for the preparation of the root canal during endodontic treatments, EASY-FILE FLEX is suitable for all endodontic motors and contra-angles with alternating anti-clockwise and clockwise movement.

- Simple quick sequence
- Clearly colour coded
- Extremely flexible
- Reduced risk of fractured instruments
- Respects the shape of the root canal
- Lifts debris easily
- Equally suitable for use on fine and curved root canals
- Sterilisable: 134°C

GO-TAPER FLEX

Go-Taper Flex is a Nickel Titanium, variable taper endodontic file system with a special heat treatment to give improved flexibility to the files.

Efficient:

- Excellent cutting power
- Superior canal cleaning due to the apical conicity of the files
- Easier lift of the debris
- Continuous rotation

Safe:

- Go-Taper Flex has a non-cutting tip for added safety.

Simple:

- Same sequences for all endodontic canals
- Easy to remember sequence
- Only 3 instruments are required in the majority of cases: A1, A2, B1.

The system is comprised of:

- 3 shaping files: A0, A1 and A2
- 3 finishing files: B1, B2 and B3
- 2 additional finishing files for larger canals: B4 and B5
- Only 3 instruments are required in the majority of cases: A1, A2, B1.

Go-Taper files are sterilisable at 134°C.

Assorted packs contain: 6 files in assorted sizes: A0, A1, A2, B1, B2 & B3.

ENDO RADAR WITH APEX LOCATOR

The Woodpecker Endo Radar Plus is a new generation desk-type brushless Endo Motor with a built in apex locator bringing you a new experience in root canal treatment.

The high performance brushless endo motor offers super high torque with a faster response and more accurate stable output for more efficient and safe preparation.

The lower motor wear and reduced heat generation also provides significantly longer service life.

- Wireless communication: The cordless handpiece is driven by wireless communication from the base unit.
- Wireless charging: Built in high capacity battery in the base unit can charge the handpiece wirelessly, to ensure long standby time for the handpiece.
- Precise torque protection: For quick and accurate reversal to greatly reduce the chance of instrument separation.
- 360° rotatable contra-angle
- Built-in Apex Locator - Automatic stop or reverse

DUAL MOVE & ONE RECI PROMOTION PACKAGE

The Dual Move & One RECI Promotion Package from Micro Mega contains the Dual Move cordless endodontic motor complete with 30 packs of One RECI, One G and One Flare NiTi Files.

Dual Move from Micro Mega is a cordless endodontic motor, with exceptional control of movement, speed and torque.

Using a cordless, well-balanced in hand and silent endodontic motor with control of movement, speed and torque, offers freedom and comfort, as well as an optimal security when shaping the root canals. The display turns around in order to suit to left-handers. The contra-angle rotates without being disconnected from the handpiece. Its miniature head and thin neck make it easier to reach the posterior teeth while keeping an excellent visibility on the root canals inlets and working area. Functionalities, high level of customisation, as well as advanced features that are available when combined with the Dual Plex apex locator, make Dual Move the ideal portable device for individual practices, in continuous rotation or reciprocating movement.

Dual Move & One Reciproci Promotion Package

253-0419

Now £2160.00

Contains: Micro-Mega Dual Move handpiece, Micro-Mega Dual Move 110/220V mains with plugs (EU, UK, JP, AU), Micro-Mega Dual Move contra-angle with adapter for manual lubrication, Micro-Mega Dual Move data transfer cable (for connection to Dual Plex), Micro-Mega Dual Move elastomer contra-angle sleeve, Micro-Mega Dual Move IFU, 1 x pack of MicroMega One Flare Files: 17mm - No.25 - 9% (5 per pack), 4 x packs of MicroMega One G Files: 25mm - No.14 - 3% (5 per pack), 1 x pack of Micro Mega One RECI Files: 25mm - No.20 - 4% (5 per pack), 11 x packs of Micro Mega One RECI Files: 25mm - No.25 - 4% (5 per pack), 11 x packs of Micro Mega One RECI Files: 25mm - No.25 - 6% (5 per pack), 1 x pack of Micro Mega One RECI Files: 25mm - No.35 - 4% (5 per pack), 1 x pack of Micro Mega One RECI Files: 25mm - No.45 - 4% (5 per pack)

ARE YOU READY FOR A MEDICAL EMERGENCY?

Rebecca Power and Sary Rahma discuss life support and how regular training and teamwork lie at the heart of handling an incident with confidence

Not everyone working in dentistry will experience a medical emergency in their career. But life-threatening incidents can and do happen – and the secret of their successful handling lies in any given team's understanding of their specific roles and responsibilities.

Dental nurse Rebecca Power works in a hospital setting and she has had the misfortune to witness a number of medical emergencies – but these situations (along with regular first aid training) have placed her in an excellent position to confidently deal with what is in front of her – swiftly and effectively.

She recalls, "We have had patients who have had a cardiac arrest whilst being an in-patient on our ward. We have a 'crash team' who are called when we have a cardiac or severe life-threatening event, so they bring the defibrillator to assist the heart's function. There are many times we have had to deal with medical first aid issues and these have always been managed promptly and with great care while abiding by the medical emergency guidelines and following the

method of DRABC (danger, response, airway, breathing and circulation)."

Rebecca works alongside Sary Rahma, a speciality doctor in oral and maxillofacial surgery at the Oral Health Department of Norfolk and Norwich University Hospital. The benefits of working in an NHS trust hospital means they have mandatory training sessions on medical emergencies and advanced life support running throughout the year.

Rebecca explains, "We both completed our first aid and adult and child hospital life support update to Resuscitation Council (UK) key points and anaphylaxis in March 2021, and have training scheduled for our department for 'medical scenarios' booked within the next month."

In fact, having been redeployed to critical care during both waves of the pandemic, they were both given extra training regarding complex medical conditions and emergencies. This has greatly helped their confidence and knowledge when faced with a medical emergency

now in their more familiar dental environment.

According to the General Dental Council, "A patient could collapse on any premises at any time, whether they have received treatment or not. It is therefore essential that all registrants must be trained in dealing with medical emergencies, including resuscitation, and possess up to date evidence of capability. Registrants must know their role in the event of a medical emergency, and ensure they are sufficiently trained and competent to carry out that role."

For Rebecca and Sary, they are seemingly well positioned to respond. They explain, "We have a designated department in the hospital for medical training in life support and we are trained by a lead resuscitation officer. We are lucky in our trust that we have advanced medical simulation models, which most people know as 'Annie' or 'Hal'. These are interactive and give us an opportunity to learn on a close to lifelike model with hands-on experience. These models give us the opportunity to learn, update our knowledge and practise our skills and techniques we would use for real emergencies in CPR, obstructed airways or choking, and more in a wide range of resuscitation skills."

They add, "These simulation models are a great way of monitoring the efficiency of our skills by recording and monitoring compressions and they give feedback on if the CPR we are performing is sufficient enough to preserve life."

So, how often does the team update its understanding and skills?

Rebecca says, "We have a mandatory minimum requirement of yearly attendance to hands-on training, plus yearly training online. We also have the option to request more training throughout the year if we feel we need extra support and for 'in situ' teaching where trainers come to our department and host dummy runs. In these, we have a simulation of what would happen in an emergency situation in our workplace locations. This is an essential part of training, so we are confident in giving emergency first aid and life support in our department and not only in a theoretical or unfamiliar setting."

She adds, "I feel more confident after having the experience of working in a hospital. This has aided me to learn more extreme cases in medical emergencies and gives exposure on how our team works together to help our patients recover."

Rebecca is evidently enthusiastic about her role and, as she has recognised previously, "the learning never stops" in dentistry.

She says, "I would recommend any dental nurse who is

keen and interested to expand their knowledge, skills and techniques to constantly enhance their learning. This is a benefit to us as clinicians, the team, and ultimately gives our patients a smoother and more confident treatment with us."

Sary suggests updating knowledge on medical emergencies is a key part of this learning process.

He adds, "I would always recommend that any dental care professional continues to update their medical emergencies knowledge, especially as new guidance becomes available, as we found out during the pandemic. Medical emergencies are thankfully a part of dentistry we encounter so infrequently, but are of such paramount importance."

Sharing the same enthusiasm for team working, they regard this approach vital to any medical emergency preparation. "Teamwork encourages us to be curious, ask questions and gain enthusiasm about certain topics – and this enthusiasm is contagious!" they say.

"Remember, there is never a question that is not worth asking. Motivate through your actions, share your knowledge and lead by example. It is extremely important for dental teams to remain united when responding to challenging situations. Policies and procedures are put in place to avoid any miscommunication and to aid the understanding of knowing what roles we play in the team. This will always reduce the risk of significant events and mistakes."

HEARTSINE SAMARITAN DEFIBRILLATORS

Compact and easy-to-use HeartSine AEDs empower first responders with lifesaving technology, while integrated Wi-Fi connectivity helps ensure the devices are ready when needed most. The first person to respond to a sudden cardiac arrest patient might be a coworker, a caregiver or even a bystander. Are you ensuring they have immediate access to the technology needed to help save a life? HeartSine AEDs are connected, intuitive and cost effective, ensuring the AED is simple to manage and ready to use by any first responder.

With the lightest weight and most compact footprint among leading AEDs, HeartSine samaritan PAD is easily transported and fit into constrained spaces. Easy-to-understand visual and voice prompts guide the rescuer through the entire resuscitation process, including CPR – a key link in the chain of survival. One- and two-button interfaces enable simple, straightforward operation. HeartSine AEDs have a remote monitoring system. LIFELINKcentral AED program manager monitors each HeartSine AED connected to a Wi-Fi network and alerts you to matters that may affect device readiness – all automatically – while helping to increase your program's readiness and effectiveness. It also features Integrated real-time CPR rate feedback with Easy-to-understand visual and voice prompts guide the rescuer through the entire resuscitation process, providing specific feedback on the rate of compressions

HeartSine Samaritan PAD 350P Semi Automatic AED	376-0000	Was £840.00	Now £814.80
